Aria use to ensure data completion for SACT

The monthly mandatory SACT submission is downloaded directly from Aria. The screen shots show the fields where data must be entered on Aria to ensure it is uploaded to SACT. If even one of the fields marked red is missing the patient will not be included in the upload. The drugs also need to be recorded as administered for the patient to be uploaded to SACT.

**NHS number** - Demographics: Patient ID: Patient ID’s

![NHS number screenshot](image)

**Date of birth** - Demographics: General tab: date of birth

![Date of birth screenshot](image)

**Gender-current** - Demographics: General Tab: sex

![Gender-current screenshot](image)
Patient postcode - Demographics: General Tab: Postal code

Clinical trial – Demographics: Clinical Trial Patient check box

Ethnicity - Demographics: Demographics Tab: Ethnicity
Registered GP practice code – Demographics: GP provider needs to be allocated here

Consultant GMC code & Consultant speciality code – Demographics: Consultant provider needs to be allocated here.
Relationship: Consultant
Classification: Clinical Oncologist, Medical Oncologist, Consultant Haematologist or Urologist
Primary diagnosis (ICD10) - Assessment: Patient Data Collection: Diagnosis: ICD10 code
(Dx date and status date entered must be on or before the date the chemotherapy was prescribed (not
the date it is due), otherwise it will not pull through)
(ICD9 and free typed diagnosis not be accepted by SACT).

Tick cancer codes only if you only want Cancer ICD10 codes to be visible.
Morphology - Diagnosis: Pathology Tab: Cell Type

Cell type must be picked by clicking on magnifying glass and by choosing description or cell category and typing in box to pick appropriate morphology for patient
Regimen - Medications: Initiation of regimen: Select a regimen (local name will automatically map to national name once uploaded).
Any drugs prescribed, other than by picking a regimen, will not be uploaded to SACT.
Any regimens prescribed, will upload using the regimen name picked, even if drugs have been deleted ie pemetrexed maintenance needs to be prescribed rather than pemetrexed cisplatin with cisplatin deleted, as otherwise pemetrexed cisplatin will be uploaded to SACT.
Programme number and Regimen number - New prescription: Orders Rx Tab: Line of treatment

Intent of treatment - New prescription: Orders Rx Tab: Tx Intent

Height and weight at start of regimen and cycle - Vital Signs: Height associated with cycle 1 / day 1 order
Performance status at start of regimen and cycle - Assessment: Patient Data Collection:
Performance status (on visit on which cycle 1 / Day 1 was ordered)

Co-morbidity adjustment - Adjust Dose: co-morbidity selected as reason for dose reduction - gives a Y or N

Date decision to treat
New Prescription Details: Date on which order is approved
Start date of regimen - New Prescription Details: Start on date

Number of cycles planned - Medications: # cycle of initiated regimen

Cycle number - Medications: cycle ordered
Start date of cycle - New Prescription Details: Start on date

Drug name - Dose Recording: Agent Name

Actual dose per administration - Dose Recording: Amount Received
**Administration route - Dose Recording: Course Description**

**Administration date - Dose Recording: Actual**

**Regimen modification – dose reduction**
One or more regimen drug doses given at 95% or less than planned dose
Regimen modification – time delay
One or more Delay Treatment actions duration of regimen.
If there is a formal delay of treatment as initiated by a delay action this data element will be a Y

Regimen modification - stopped early
Regimen discontinuation before the number of cycles was reached
(use 'Starting from effective date' not 'All')
Regimen outcome summary, End of treatment and Date of final treatment
On discontinuation enter reason for regimen being stopped or ‘Plan Complete’ for end of treatment from drop down menu.

Date of death - Demographics: General Tab: Date of Death
